

Personal Income by State and Region, First Quarter 1998

By Duke Tran

The quarterly estimates of State personal income are prepared by the Regional Economic Measurement Division.

IN THE first quarter of 1998, U.S. personal income increased \$112.0 billion, or 1.6 percent (**table A**).¹ The largest increase was in the Southeast region, which accounted for 25 percent of the growth (**chart 1**). The increase in the Southeast was largely accounted for by Florida, Virginia, North Carolina, and Georgia.

By type of income, most of the increase in U.S. personal income was accounted for by an \$80.6 billion increase in net earnings.² Transfer

1. The estimate of personal income for the Nation is derived as the sum of the State estimates; it differs from the estimate of personal income in the national income and product accounts (NIPA's) because, by definition, State personal income omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. This estimate can also differ from the NIPA estimate because of different data sources and revision schedules.

2. Net earnings are by place of residence and are calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

Net earnings (by place of residence) is often used to analyze changes in the composition of personal income; earnings (by place of work) is often used to analyze changes in the industrial structure of earnings. For the definitions of the components of earnings, see *State Personal Income, 1929-93* on the BEA Web site at <www.bea.doc.gov/bea/mp.htm>.

payments increased \$20.0 billion, and dividends, interest, and rent increased \$11.4 billion.

U.S. earnings by place of work increased \$88.4 billion (**table B**). Earnings in all the industries except farms increased; the largest increase (\$32.6 billion) was in services. The decline in farm earnings was accounted for by a decline in farm proprietors' income, reflecting decreases in the prices of crops and livestock.

Table 1 at the end of this article presents the quarterly estimates of personal income for each State and region, beginning with the first quarter of 1995. **Table 2** presents the quarterly estimates of personal income by major source and of earnings by Standard Industrial Classification division, beginning with the third quarter of 1996.

Growth rates by region

The first-quarter growth in personal income of 1.6 percent was the same rate as in the fourth quarter of 1997.³ By type of income, a deceleration in net earnings was offset by accelerations in transfer payments and in dividends, interest, and rent. By industry, growth in earnings by place of work decelerated in farms, in manufacturing, in transportation and public utilities, and in trade; earnings growth accelerated in construction, in finance, insurance, and real estate, in services, and in government.

In the Southwest, Far West, Rocky Mountain, and Southeast regions, personal income grew faster in the first quarter than in the fourth. In all four regions, earnings growth accelerated in construction, in finance, insurance, and real estate, in retail trade, and in government.

In the Great Lakes, New England, Plains, and Mideast regions, personal income grew slower in the first quarter than in the fourth. In all four regions, earnings growth decelerated in farms,

3. In this article, the percent changes are expressed at quarterly rates.

CHART 1

Regional Shares of the U.S. Dollar Change in Personal Income, 1997:IV-1998:I

(U.S. dollar change=\$112 billion)

Table A.—Personal Income by Component, 1997:IV–1998:I

[Seasonally adjusted]

1. Percent changes are expressed at quarterly rates and are calculated from unrounded data.

2. Net earnings by place of residence is earnings by place of work—the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income—less personal contributions for social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

NOTE.—Estimates may not add to totals because of rounding.

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

2. Also includes mining and agricultural services, forestry, and fishing.

NOTE.—Estimates may not add to totals because of rounding.

Text continues from page 167.

in manufacturing, in wholesale trade, and in services.

Growth rates by State

In all States, the growth rates in personal income in the first quarter exceeded the 0.1-percent increase in the prices paid by U.S. consumers (as measured by the price index for personal consumption expenditures). The rates of growth in personal income ranged from a 2.3-percent increase in Alaska to a 0.4-percent increase in North Dakota.

The States with the fastest rates of growth in personal income were Alaska (2.3 percent), South Carolina (2.3 percent), Massachusetts (2.1 percent), Colorado (2.1 percent), and Arizona (2.1 percent) (*chart 2*). By type of income, net earnings contributed substantially more to personal income growth in all of these States than transfer payments or dividends, interest, and rent. By industry, services was the major contributor to growth in earnings by place of work in all of these States (*tables C* and *D*). In Alaska, retail

trade, government, manufacturing, and transportation and public utilities also contributed substantially; in South Carolina, manufacturing, construction, and retail trade; in Massachusetts, manufacturing, finance, insurance, and real estate, and construction; in Colorado, construction and finance, insurance, and real estate; and in Arizona, finance, insurance, and real estate and retail trade.

The States with the slowest rates of growth in personal income were North Dakota (0.4 percent), Delaware (0.5 percent), Vermont (0.5 percent), and Arkansas (0.7 percent). Personal income growth in all of these States was damped by little or no growth in net earnings. By industry, large declines in farm earnings damped growth in earnings by place of work in North Dakota and Arkansas. In Delaware, declines in manufacturing and in finance, insurance, and real estate were the major contributors to a decline in earnings. In Vermont, a decline in manufacturing was the major contributor to the negligible growth in earnings.

Tables C, D, 1, and 2 follow.

1. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

2. Also includes mining and agricultural services, forestry, and fishing.

NOTE.—Percent changes are calculated from unrounded data.

^p Preliminary.

^r Revised.

1. Percent changes are expressed at quarterly rates and are calculated from seasonally adjusted unrounded data.

Note.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA) estimate of personal income because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different data sources and revision schedules.

Table 2.—Personal Income by Major Source
 [Millions of dollars, seasonally adjusted]
